

LONG WAITING TIMES IN PHILIPPINE PUBLIC HOSPITALS

When patients wait, the whole healthcare system feel the delay.

23%

of patients in public health facilities reported long waiting time as an issue.

33.8%

among public-facility emergency-care patients.

WHY DO PATIENTS WAIT SO LONG?

HIGH PATIENT VOLUME

More patients than what the hospital can accommodate.

MANUAL QUEUEING

Patients line up physically for registration, payment, and other hospital services.

LIMITED RESOURCES

Insufficient staff, rooms, beds, and equipments lead to delays in service.

INEFFICIENT PATIENT FLOW

When patient demand exceeds capacity, waiting areas become congested.

OVERCROWDING

Delays in referrals, tests, admissions, and transfers create congestion.

THE SOLUTION

eQueue PH

DIGITAL QUEUE & PATIENT FLOW MANAGEMENT SYSTEM

1

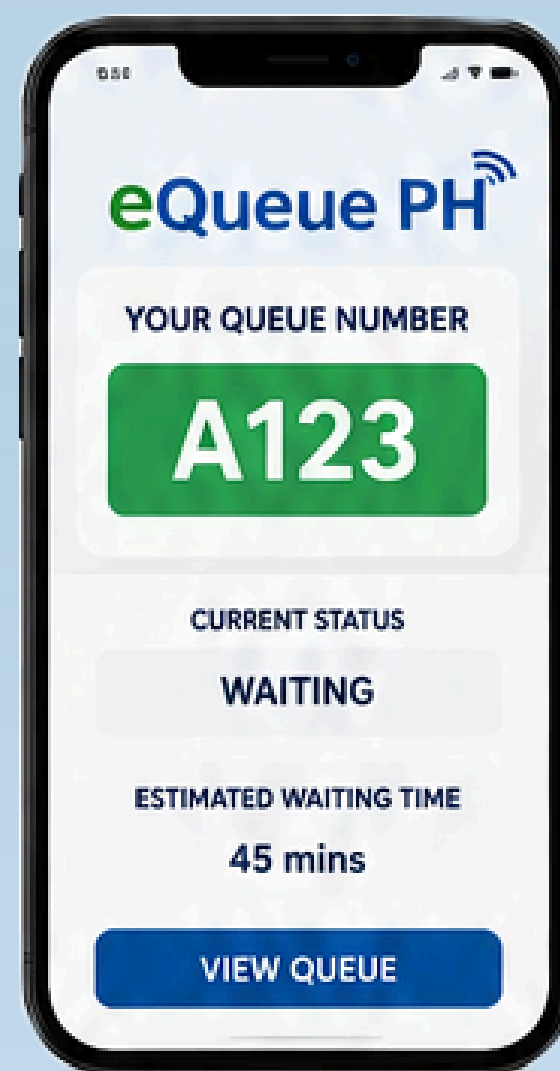

REGISTER

2

GET DIGITAL
QUEUE NUMBER

3
